1

Collect 10 rocks from your yard. Use the rocks to create different addition and/or subtraction problems.

Find objects in your house that are 3d shapes: cone, sphere, cube, cylinder.

Count your steps from your bed to the fridge. Now take big steps and count the number of steps it takes. Is it the same? Why not? Which step (the big or the small) is more?

Using 10 pieces of cereal, create different addition and/or subtraction facts.

Count to 100 while doing different exercises: jumping jacks, sit ups, monster stomps, toe touches, etc.

2

Take a handful of coins. Sort them into different piles. Tell your Grown Up why you sorted your piles the way you did.

Practice writing your numbers. Can you write to 100?

Find something that is the same shape as a square and draw a picture of it.

Build numbers with any object: rocks, toys, legos, blocks, cereal, play-doh, etc.

Use a deck of cards to play Addition Top-It (War).

3

Count things around the house.

Use playing cards to practice comparing numbers with greater than, less than, equal to (5 is greater than 2).

Grab 10-20 objects throughout the house (or yard) and sort them by color, shape, and size.

Practice writing numbers 0-20 and counting objects showing that amount.

Count the number of spoons and the number of forks in your kitchen. Which number is the least? Most?

4

Pick numbers between 1-20 and count on from that number.

Count down (backward) from 20.

Find objects that are equal.
Example:
3 steps outside is equal to 3 flower pots.

Lay down on a blanket outside and count how many birds you can see. Write the number down.

How far can you count out loud?
